

Message d'erreur lors de l'appel à icAgenda

Catchable fatal error: Argument 1 passed to JInput::getArray() must be of the type array, none given, called in/com_icagenda/utilities/list/list.php on line 250

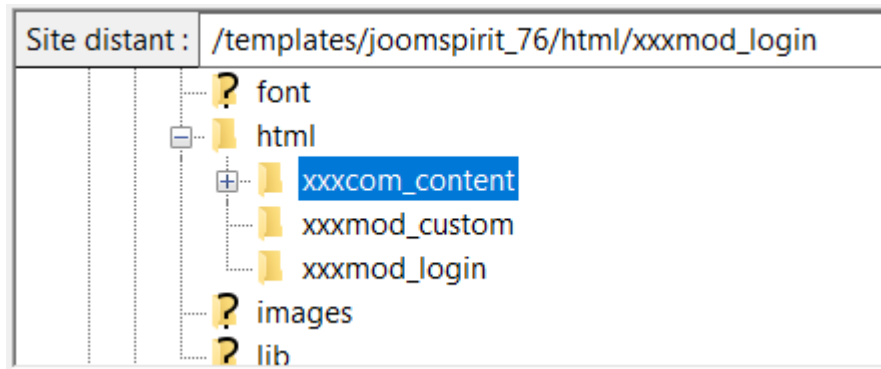

```
// Get Input vars  
$vars = $jinput->getArray();
```

and defined in/libraries/joomla/application/input.php on line 166

```
public function getArray(array $vars, $datasource = null)
```

Override du template

J'ai renommé les dossiers pour les désactiver, mais sans succès.

Voici mon intervention dans l'override, il s'agit du fil d'Ariane

```
// if the menu item does not concern this article  
if ($menu && ($menu->query['option'] != 'com_content' || $menu->query['view'] != 'article' || $id != $this->item->id))  
{  
    // If this is not a single article menu item, set the page title to the article title
```

```
if ($this->item->title) {
    $title = $this->item->title;
}
$path = array(array('title' => $this->item->title, 'link' => ''));
/* Commenté par Patrice RAUCQ - Pour cacher les catégories dans le fil d'Ariane
$category = JCategories::getInstance('Content')->get($this->item->catid);
while ($category && ($menu->query['option'] != 'com_content' || $menu->query['view'] == 'article' || $id != $category->id) && $category->id > 1)
{
    $path[] = array('title' => $category->title, 'link' => ContentHelperRoute::getCategoryRoute($category->id));
    $category = $category->getParent();
}
*/
$path = array_reverse($path);
foreach($path as $item)
{
    $pathway->addItem($item['title'], $item['link']);
}
}
```
